

HOW MOBIUS BUILDS

SUSTAINABLE CYBER SECURITY

INTO START-UPS

TECH START-UPS

The energy, passion and resources being poured into tech start-ups are incredible. They are exciting and they will change our world. They do however exist in a world in which cyber security concerns are growing, with increasing breaches of security and a linked increase in regulatory oversight to mitigate the risks.

Most tech start-ups have ambitions to plug into the mainstream economy upon launch and will thus be thrust into this world of needing to prove the controls they have in place to mitigate their risks – to their customers and partners as well as to the relevant regulators – of which the financial services regulators are some of the most stringent.

HOW MOBIUS CAN HELP

Mobius has a relatively unique insight into this topic – we have worked with some of the largest companies in the world to help them mature their own cybersecurity and align with Financial Services regulations. This gives us insights into what their requirements of their partners/ service providers (read FinTech start-ups) will be. This is further cemented by the third-party risk management projects we run

for these same clients, whereby we need to help them understand the threats and risks posed to them by their partners / service providers (including FinTech start-ups).

We have the experience and methodologies to ensure that we are able to help start-ups understand the threats that are relevant to them and to build the requisite level of security into the

start-up at each phase of their growth (from conception through to launch). Our approach ensures that the start-up isn't bogged down by excessive controls in the early phases but also enables us to build these controls out in a managed fashion according to. We apply our principle of "Minimum Viable Controls" to ensure that these are right sized to your start-up.

THE MOBIUS ADVANTAGE

EXPERTISE

- Consulting: set up processes
- Managed services: run functions on your behalf
- Technology: automate processes with Triplicity software
- Training: equip you to manage third-party risk independently
- Certification in European Privacy Law (CIPP/E)
- Certification in Risk and Information Systems Control (CRISC)
- Certified Information Security Manager (CISM)

APPROACH

- Identify and manage your actual risks quickly and holistically
- Apply appropriate level of security based on risk presented by the third party
- Strategically assess your present and future third parties
- Remotely assess third parties across Europe and worldwide

RESULTS

- Information risk protection
- Regulatory compliance
- Greater efficiency
- Improved cost-effectiveness
- Improved business relationships

THE MOBIUS APPROACH TO CYBER SECURITY FOR START-UPS

The Mobius team works alongside you so you can focus on the business of the start-up while we run with the security aspects. We are able to help you start with the end in mind and ensure that you have the correct Cyber Security protections in place for your start-up at each phase of its exciting growth.

THE ALIGNMENT OF CYBER SECURITY PROTECTION TO THE PHASE OF YOUR START-UP
